

InishTech Customer Story

Customer:
Business Policy Solutions

Location:
Charlotte, NC

Products:
BPS Rules

Executive:
Blaise Taylor,
President

Profile:
BPS provides software for application developers & business users that is designed to create efficiencies in the SDLC. The BPS framework allows business users to define and deploy logic to business applications in real time.

Business Policy Solutions

Background

Business Policy Solutions provides software that enables business users of claims, tax preparation, underwriting, call center scripting and trouble diagnosis applications (among others) to define and deploy changes to business logic. The BPS product is called the BPS Rules Framework and includes a logic authoring component (BPS Logic Builder) and a Solutions template (BPS Applications). The framework allows business users to define and deploy logic to business applications in real time. Blaise Taylor of BPS takes up the story.

Requirement

“Our requirements were pretty simple really. We wanted to provide a license activation facility for the BPS Logic Builder so that we could manage and control who was using the software. “

Solution

“We integrated the InishTech components into our projects pre-build so that they can then check for licenses and licensed features during runtime.

Benefits

“There’s a lot of value to Software Potential. The InishTech solution gives us an online portal to manage licenses and enables a straightforward, easy way to activate our customers with our software.”
